

Certifying expertise in the explosives sector

EUExcert aims to establish a framework for vocational education for people in the European explosives sector.

Training and education institutions as well as social partners will have a tool for competence and career planning. New training methods will also be developed.

Within the limits of the Leonardo da Vinci programme the pilot project will develop a comprehensive framework which will describe and categorise all of the competencies for workers engaged in the manufacture or use of explosives.

The competencies will be underpinned by a training and education programme which will identify the curriculum of subjects and topics, and the knowledge necessary to generate and develop the competencies.

A range of products including work based learning programmes, e-learning packages using both the Internet and CD-ROM, and conventional teaching materials will be developed and tested in partner nations.

The results of this project will be widely disseminated through a programme of reports, demonstrations and presentations to stakeholder groups in the EU member nations.

Individuals and organisations will be encouraged to form a network with the view of promoting a world class European explosives community.

EU Excert

*Certifying Expertise in
European Explosives Sector*

The EU Project

PARTNERS

Aims of the project:

Improve safety and create EU standards for workers in the explosives sector

The overall aim of EUExcert is to reduce the numbers of accidents in the explosives business.

In the explosives' sector in several European countries a high proportion of the most experienced and knowledgeable people are nearing retirement.

As a consequence it is important to replenish this expertise in this key technological area.

The project involves:

- ◆ Mapping competency needs for the explosives industry for the European market
- ◆ Developing a competency framework that can be developed into a European standard
- ◆ Disseminate results from the project to international stakeholders and the explosives sector.
